

ABSTRACT

A method and system for the establishment of a named collaborative space in a collaborative computing environment in which a named space defining a place within the collaborative computing environment is provided. A membership set for the collaborative space is identified in which the membership set includes one or more members. At least one business process accessible within the named space is provided. The at least one business process can provide a business component instance which provides a specific business function within the named space. The business component instance can be in the form of a portlet.
